

Print & Design Specifications

[Packaging Templates]

Updated July 2007

Please contact us at info@onedisc.com or 800-427-0692 with any questions regarding the use of the design templates.

All of our packaging templates are in Adobe Illustrator CS3 or Adobe InDesign CS3. Please contact us if you have any questions about working with them or about the specs below. OneDisc.com also offers professional graphic design services to design your packaging from start to finish. The cost for creating custom packaging starts at \$100.00.

Preferred Applications: Adobe Illustrator (.ai) or Adobe InDesign (.indd), please include all embedded and linked image files. Also, please ensure that all images are "high resolution" not 72dpi (i.e. Web Graphics). We also request that you use the specific template that you receive, do not try to recreate it.

Acceptable Image Format: TIFF

Image Resolution: 300dpi or better

Colors: Please use CMYK or PMS. Artwork done in Adobe Illustrator or Adobe InDesign with both CMYK and PMS will incur additional printing costs. Unlike printing on Discs, CMYK works best on packaging materials. If PMS has to be used please use only the Pantone® Coated Color Library for PMS colors, and please check your color library to insure that the correct PMS color is there before sending final print package to OneDisc.com. If there is going to be Disc artwork with the packaging please refer to the disc artwork pdf on our website.

Fonts: Please outline your fonts whenever possible. Type 1 PostScript fonts recommended. Please include all fonts in a separate file with disc art if possible. Please do not "stylize" any fonts, use correct version (i.e. Helvetica Bold Italic). We work primarily on PC's but have full Mac capabilities.

Review Process: OneDisc.com reviews each design and will correct minor errors for free. If we see larger problems with your artwork we will contact you discuss the issues. In all cases you will be approving a 'Final Proof' (pdf or jpg) from our factory before production.
